The International Security Assistance Network:
Paving the Way for Greater Customer Involvement
By
Major Dennis Olson, USA
DISAM Instructor

The International Security Assistance Network (I-SAN) is the newest addition to the security assistance automation community. Adapted from the highly successful Security Assistance Network (SAN), the I-SAN incorporates many of the SAN's capabilities. In this regard, the I-SAN will increase the international customers' awareness and enhance their capability to internally manage their security assistance training program. The intent of this article is to provide an overview of the I-SAN. Specifically, it describes how the I-SAN compares to the SAN, what hardware and software are necessary, what the benefits are for international customers as well as for their U.S. counterparts, how to get access to the I-SAN, what help is available once registered and, finally, what future developments are being contemplated for the I-SAN.

Thank you for viewing this presentation…..

- **This completes your first look at the International Security Assistance Network.**

- **You should at this point be able to access the I-SAN, find the principal Security Assistance web sites, and access the Security Assistance Management Manual (SAMM).**

- **You should also be able to access the principal International Training Management sites.**

- **Contact charles.collins@disam.dsca.mil for any questions concerning this presentation.**

How To:
Use the I-SAN
